Charan Kotamraju PMP®

Product Manager | AI Platforms, Enterprise Systems & Organizational Intelligence

Hyderabad, Telangana, India

Summary

I'm a Product Manager with experience building AI/ML, cloud, analytics, and enterprise platforms across Financial Services, Telecom, and Media.

Over the last several years, I've worked on large-scale enterprise systems spanning operational intelligence, AI-driven optimization, cloud modernization, regulatory platforms, and product transformation initiatives.

At JPMorgan Chase, I've led and shipped multiple AI/ML-driven products across ATM Channel and Home Lending platforms, including resiliency intelligence, cash optimization, automated qualification systems, and enterprise compliance workflows operating at significant scale.

What increasingly interests me is not just AI capability, but how enterprises themselves evolve in the AI era.

Most organizations today still operate through fragmented workflows, disconnected systems, and static operational models. As AI systems become more adaptive, I believe enterprises will require a fundamentally different operational layer — one that combines orchestration, governance, memory, and organizational intelligence.

Outside of work, I've been independently exploring that direction through AI-Enterprise-OS:

Website: <https://ai-enterprise-os.vercel.app>

GitHub: <https://github.com/enigmaicon-eng/AI-Enterprise-OS>

AI-Enterprise-OS is an experimental architecture initiative exploring:

- adaptive enterprise operations
- governance-aware AI execution

- enterprise orchestration systems
- organizational memory infrastructure
- runtime intelligence
- AI-native operational models

My interests sit at the intersection of:

- * Enterprise AI
- * Product Strategy
- * Platform Systems
- * Operational Intelligence
- * Organizational Design
- * Runtime Governance

Always interested in conversations around enterprise AI systems, orchestration, adaptive operations, and the future of AI-native organizations.

Experience

JPMorgan Chase & Co.

Product Manager

September 2023 - Present (2 years 11 months)

Hyderabad, Telangana, India

- Independently identified, incubated, and drove multiple AI/ML product opportunities from concept to production across ATM Channel and Home Lending platforms, securing Executive sponsorship and cross-functional alignment.
- Piloted an AI-driven resiliency and operational intelligence initiative across the ATM estate, focused on anomaly detection, predictive operations, service continuity, and enterprise-scale optimization.
- Piloted an AI-powered cash optimization platform designed to reduce unnecessary cash replenishment cycles by ~20%, targeting multi-million-dollar annual operational savings through predictive demand intelligence.

- Owned enterprise regulatory product delivery for HMDA compliance across 100,000+ annual mortgage application records, maintaining 100% compliance adherence while improving operational reporting efficiency.
- Led cloud modernization and enterprise platform delivery initiatives across multiple engineering teams supporting millions of customer interactions and high-availability banking operations.
- Partnered with Engineering, Operations, Compliance, Data Science, and Executive stakeholders to define product strategy, execution roadmaps, governance controls, and operational success metrics.
- Drove roadmap prioritization and enterprise delivery across cloud modernization, AI/ML and operational intelligence initiatives spanning consumer banking and lending ecosystems.
- Established scalable product operating mechanisms for cross-functional execution, stakeholder governance, release coordination, and enterprise change management.

Accenture

Management Consultant

June 2021 - September 2023 (2 years 4 months)

Hyderabad, Telangana, India

- Led large-scale enterprise transformation initiatives across Telecom and Media clients, delivering cloud modernization, analytics, digital operations, and platform optimization programs.
- Managed cross-functional product and technology delivery across distributed engineering, QA, operations, and business teams spanning enterprise-scale digital transformation initiatives.
- Drove operational efficiency improvements through automation, workflow redesign, and platform modernization initiatives supporting high-volume enterprise operations.
- Partnered with client leadership teams to define product requirements, roadmap priorities, release planning, governance structures, and enterprise execution strategies.

- Led stakeholder alignment across business, engineering, operations, and vendor ecosystems to accelerate delivery execution and reduce operational bottlenecks.
- Supported enterprise cloud migration and modernization programs focused on scalability, resiliency, performance optimization, and operational simplification.
- Built expertise across enterprise architecture, operational systems, analytics workflows, agile delivery, and large-scale cross-functional execution.
- Worked across highly matrixed enterprise environments managing delivery complexity, stakeholder coordination, governance processes, and strategic transformation programs.

Wipro Limited

Digital consulting, Transformation, Business Analysis and Operations management

February 2018 - June 2021 (3 years 5 months)

Pune, Maharashtra, India

- Delivered enterprise software solutions across Telecom domain platforms, contributing to large-scale operational and customer-facing systems.
- Collaborated with cross-functional engineering and QA teams to build, test, and support enterprise application delivery across multiple releases.
- Contributed to system enhancement, issue resolution, deployment coordination, and platform stability initiatives within high-volume enterprise environments.
- Participated in end-to-end SDLC activities including requirements analysis, development, testing, deployment, and production support.
- Built foundational expertise in enterprise systems, operational workflows, software engineering practices, and scalable delivery models.
- Developed strong analytical, problem-solving, and stakeholder collaboration skills while operating in fast-paced enterprise technology environments.
